2012 Purdue University Turfgrass Research Summary

Table of Contents

Letter from Purdue Turf Program Faculty ................................................................. i
Supporters of the Purdue University Turf Program in 2012 ........................................... ii

Turf Management

Association of Candidate Genes with Drought Tolerance Traits in Diverse Perennial Ryegrass Accessions ........................................................................................................ 1
Growth and Physiological Responses of Diverse Perennial Ryegrass Accessions to Increasing Salinity .................................................................................................................. 7

Weed Management

Efficacy of Methiozolin for Controlling Annual Bluegrass in a Creeping Bentgrass Golf Course Putting Green .................................................................................................................. 12
Dandelion Control and Flower Suppression with Defender Herbicide ......................... 15
Herbicide Selection and Timing Influences Ground Ivy Control – 2012 Results ............. 20
Selecting Turfgrasses and Mowing Strategies to Reduce Mowing Requirements .............. 27
Controlling Poa annua on putting green height turf in Indiana, Michigan, and Nebraska: 2012 Research Update ........................................................................................................ 32
Postemergence Broadleaf Herbicide Safety on Creeping Bentgrass Putting Greens – 2012 Update .................................................................................................................. 35
Evaluation of Crabgrass Control with Various Preemergence Herbicides - 2012 ............... 39
Herbicide Efficacy on Wild Violet – Greenhouse Experiments ........................................ 42

Insect Management

Influence of Application Rate on the Efficacy of Acelepryn Against Bluegrass Billbug in Kentucky Bluegrass Turf 2012 ..................................................................................... 48
Residual Activity of Meridian 25WG and Two Rates of Acelepryn 1.67SC Against Second and Third Instar Black Cutworm Larvae on Creeping Bentgrass Turf ..................................... 50
Influence of Application Timing on the Efficacy of Acelepryn and Merit Against Japanese Beetle Larvae in Kentucky bluegrass turf ............................................................................. 52
Efficacy of Single vs. Split-Application of QualiPro Imidacloprid, Aloft and Allectus Against Japanese Beetle Larvae in Kentucky Bluegrass Turf 2012 ............................................. 54

Disease Management

Integrating fungicide and genetic host resistance for control of dollar spot on creeping bentgrass .......................................................................................................................... 56
Evaluation of Velista (penthiopyrad) for Control of Brown Patch and Dollar Spot on Creeping Bentgrass, 2012 ........................................................................................ 59
Turfgrass Industry:

As the green industry continues to have a large impact on Indiana and the nation, Purdue University has assembled an outstanding team of researchers, extension personnel, and educators that are dedicated to solving problems and helping meet the needs of Indiana residents. One segment of the Indiana green industry that continues to provide a significant impact on the state’s economy is the turfgrass industry, which includes residential and commercial lawn care, sports turf, cemeteries, sod production, golf course maintenance, and more. Indiana’s professional turfgrass industry is estimated by some to generate in excess of $1.4 billion in annual expenditures and provide over 11,500 jobs.

The Annual Report of the Purdue University Turf Program is published each year by the Purdue Turf Team and features significant findings made by turfgrass scientists over the past year. It is our desire that this publication will keep our stakeholders up-to-date on significant changes and advancements that affect our industry.

This 2012 Annual Report includes 16 papers from faculty, staff, and graduate students. We hope that these findings will enhance your ability to conduct business in an efficient and productive manner.

We would also like to recognize the many organizations, companies, and individuals who have contributed their time, talent and resources to help make our program successful. We are forever indebted to the many people who contribute to this program. Special recognition goes to the Midwest Regional Turf Foundation which supports the research and extension programs of each member of the Turf Team and also provides substantial support towards the operating and capital expenses of the W.H. Daniel Turfgrass Research and Diagnostic Center.

We hope that this publication will be of value to all persons with an interest in the Indiana green industry.

Assistant Professor
Supporters of the Purdue University Turf Program in 2012

The Turfgrass Program at Purdue University relies on the support of the Midwest Regional Turf Foundation and gifts from the turfgrass industry for a large portion of its operating budget. We would like to extend our thanks to the members of the Midwest Regional Turf Foundation for their loyal support of turfgrass research and education at Purdue.

In addition, various individuals, organizations, and businesses have provided grants, products, or equipment to support our efforts throughout the year. Without this support, we would be unable to conduct many of the research projects included in this report.
